

Python

Default arguments

Saurabh Shukla (MySirG)

Agenda

- ① Default Arguments
- ② Function always return something

Default Arguments

Default value indicate that the function argument will take that value if no argument value is passed during the function call.

The default value is assigned by using the assignment (=) operator.

```
def add(a, b, c=0):
```

```
    s = a + b + c
```

```
    return s
```

```
print("sum is", add(5, 6, 10))
```

```
print("sum is", add(5, 6))
```

you cannot have non default argument
after default argument

Return Something

```
def f1():  
    print("Hello")
```

```
a = f1()
```

↖ what you are expecting in a?

None

Return Something

```
def f1():  
    print("Hello")
```

```
a = f1()  
print(a)  
print(type(a))
```
