

Python

Types of methods

Saurabh Shukla (MySirG)

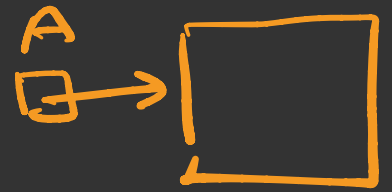

Agenda

① Types of methods

Types of methods in the class

- ① Instance method
- ② static method
- ③ class method

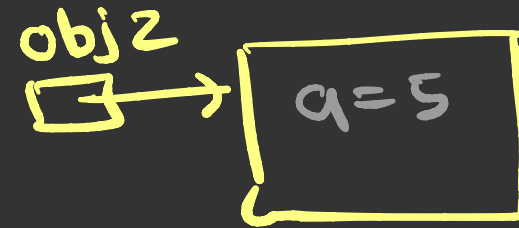

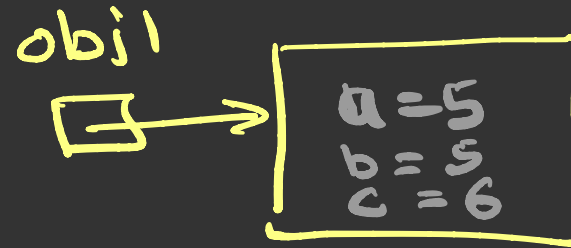

Instance Method

class A:

```
def f1(self):  
    self.a = 5
```

```
def f2(self, x, y):  
    self.b = x  
    self.c = y
```

```
obj1 = A()
```

```
obj1.f1()    # f1(obj1)
```

```
obj2 = A()
```

```
obj2.f1()    # f1(obj2)
```

```
obj1.f2(5,6) # f2(obj1,5,6)
```

A.f1() Error

A.f1(6) Error

A.f1(obj1) correct

Static Method

class A:

 @staticmethod

 def f1():

 print("Hello")

 @staticmethod

 def f2(a, b):

 print(a, b)

A.f1()

A.f2(5, 6)

obj1 = A()

obj1.f1()

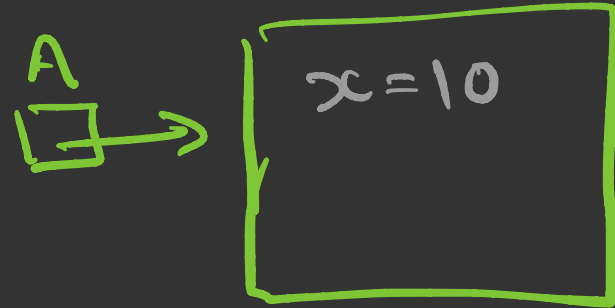

Class Method

class A:

@classmethod

def f1(cls):

cls.x = 10

A.f1() $\neq$ f1(A)

obj1 = A()

obj1.f1() $\neq$ f1(A) ✓

~~f1(obj1)~~

Instance Object . method ()

instance method
